

Reading & Billing V 2.0 Software

Reading & Billing V2.0 software is a Windows based™ software package that allows the end-user to manually or automatically read National meters having RS485 Modbus communications. This system comes with unlimited / unabused telephone support and unlimited downloads, from an FTP site, in case of PC upgrade or hard drive corruption.

R&B V2.0 polls the meters for current kWh / kW readings (depending on meter type) and saves the readings for trending and billing purposes. R&B V2.0 offers the ability to build a customized Rate schedule, view past meter usage and view each meter's programming and current data to confirm proper meter installation.

The screenshot displays the National Meters software interface with several windows open:

- Site Meters...**: A table listing meter details.

Meter Address	Serial #	Model	Description	Units	Used	TenantID
32	405232	Series 4000		KWH	Yes	1
29	405229	Series 4000		KWH	Yes	1
40	405240	Series 4000		KWH	Yes	1
36	405236	Series 4000		KWH	Yes	1
37	405237	Series 4000		KWH	Yes	1
41	405241	Series 4000		KWH	Yes	1
31	405231	Series 4000		KWH	Yes	1
- Billing Reports**: A window titled "Utility Bill" showing a "Current Amount Due" of \$7471.20 and a table of period totals.

Start of Period	End of Period	Period Totals
10/02/09	10/31/09	29 Days
108661	111131	2470 KWh
75087	75663	576 KWh
82078	84261	2183 KWh
122475	125684	3209 KWh
- National Meters**: A window showing a list of meters and options for "Date Range" and "Usage Data".
- Time Schedule**: A dialog box for configuring a schedule.

Start Date: 10/15/2006
Start Time: 7:00 AM
